heart;

The invention relates to an angiogenic composition (I) comprising at least one peptide chosen from a group of peptides containing isoleucine-glycine-aspartic acid (IGD-containing peptide), and at least one angiogenic growth factor other than the at least one peptide, where the peptide stimulates cell migration. Also disclosed is a composition (III) that is active for promoting cell migration and/or angiogenesis under cell growth promoting conditions comprising an IGD-containing peptide,

Angiogenic composition comprising peptides containing isoleucine-glycine-aspartic acid, that stimulate cell migration, and angiogenic growth factor useful for promoting myocardial or peripheral angiogenesis.

The invention relates to an angiogenic composition (I) comprising at least one peptide chosen from a group of peptides containing isoleucine-glycine-aspartic acid (IGD-containing peptide), and at least one angiogenic growth factor other than the at least one peptide, where the peptide stimulates cell migration. Also disclosed is a composition (III) that is active for promoting cell migration and/or angiogenesis under cell growth promoting conditions comprising an IGD-containing peptide, and a matrix material. Compositions of the invention are useful for promoting myocardial angiogenesis which involves administering (I) or (III) intramyocardially to an isschaemic area of the heart of an individual, to enhance vascular endothelial cell migration and/or proliferation. They are also useful for promoting peripheral angiogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    migration and/or proliferation surficient to receptable carrier in flow to the ischaemic tissue. The physiologically acceptable carrier in the composition is polyvinyl pyrrolidone. The current sequence represents an IGD-motif peptide that is specifically claimed in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proliferation. They are also useful for promoting peripheral angiogenesis in an ischaemic region of an organ or tissue fed by a peripheral vessel, by enhancing vascular endothelial cell misration and/or proliferation at the ischaemic region, or for enhancing blood flow to an ischaemic tissue of the body, where the composition stimulates vascular endothelial cell migration and/or proliferation sufficient to restore or increase blood migration and/or proliferation sufficient to restore or increase blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             promoting myocardial angiogenesis which involves administering (I) (III) intramyocardially to an ischaemic area of the heart of an individual, to enhance vascular endothelial cell migration and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Angiogenic composition comprising peptides containing isoleucine-glycine-
aspartic acid, that stimulate cell migration, and angiogenic growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Angiogenic composition; isoleucine-glycine-aspartic acid; IGD; angiogenic growth factor; cell migration; angiogenesis; ischae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                         sequence of a Bifidobacterium genome selected from the nucleotide (c) sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at (c) least 90% identity or which hybridises with the sequence exhibiting at (c) least 90% identity or which hybridises with the sequence siven in CC ABQ81843. Also described is a polynucleotide (II) encoding a CC fusion protein, comprising a sequence selected from 1097 sequences given in ABP65258 to ABP66354 ligated in frame to a polynucleotide encoding a cc in the cologous polypeptide. (I) has antidiarrheic and antibacterial (C) activities, and can be used as an inhibitor of Salmonella. (I) (which is a probe) is useful for the detection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotarirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented convolutes, ife-creams, fermented cereal based products, ice-creams, fermented cereal based products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in an ischaemic region of an organ or tissue fed by a peripheral vessel, by enhancing vascular endothelial cell migration and/or proliferation at the ischaemic region, or for enhancing blood flow to an ischaemic tissue of the body, where the composition stimulates vascular endothelial cell migration and/or proliferation sufficient to restore or increase blood flow to the ischaemic tissue. The physiologically acceptable carrier in the composition is polyvinyl pyrrolidone. The current sequence represents an IGD-motif peptide that may be utilised in an angiogenic composition of

(I) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent Bifidobacterium related nucleotide sequences given in the Sequence tisting from the present invention but not mentioned further within the specification. N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office
The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property at ransformed plant with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.
                                                                                                                                                                                                                                                                            New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Cao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (CAOY/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC improved plant properties e.g. improved plant properties e.g. improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification CC increased resistance to plant disease, better growth rate by modification CC of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of carbohydrate, introgen or CC content, improved plant growth and development under at least one stress CC providing improved plant growth and development under at least one stress CC condition, improved lignin production or improved galactomannan CC production. Note: The sequence data for this patent did not CC form part of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

The method involves: (a) corrections a database containing reference sequences, comprising a subunit containing a database containing reference sequences, comprising a subunit containing a database containing reference sequences, comprising a subunit containing a database (Topoll), or a homologue, where each reference sequence is specific to a different species of a chosen group, and the macromolecule comprises lst and 2nd conserved regions adjacently flanking the signature comprises lst and 2nd conserved regions adjacently flanking the signature complifying DNA segments of the signature region using a universal primer complifying DNA segments of the signature region using a universal primer composition, comprising a primer constructed to bind a DNA encoding the macromolecule, to produce amplified DNA segments. The present sequence concerned a protein fragment containing variable portions of the type II topoisomerase for Rickettsiae rickettsia for use in the database. The containing teached can be used to identify all of the different organisms present in a single sample without using multiple probes. It can accurately containing the distinguish among similar and related species, and can be used with, e.g. contaminated food products, tissue or fluid samples from diseased humans, animal or plants, soil samples and water samples from any source.

The present sequence is a polypeptide encoded by one of a large number of STSTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT

Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA, sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                           New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for

```

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid grobes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a vector comprising at least 8 more probe cited above, an ORF-encoded peptide comprising at least 8

acids

of.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe cited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their confidence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html?DocID=20030194704
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alternations in the genomic locus that includes their exon, in assessing alternations in the genomic locus that includes their exon, in assessing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gene
                                                                                                                                                                                                                                                                                                              Dumas Milne Edwards

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0
```

5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated

polypeptide encoded by one of a large number of

region

of the mRNA because

Claim 13;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                               07-JUL-2000;

Sequences AAU18508-AAU18551 represent the cytoskeletal element-related CC polypeptides of the invention. Cytoskeletal polypeptides and their CC associated polynucleotides are useful in the diagnosis, treatment and CC prevention of various types of disorders in e.g. humans, mice, rabbits, CC goats, horses, cats, dogs, chickens or sheep. A pathological condition CC can be determined by determining the presence or absence of a mutation in a cytoskeletal polynucleotide. The treatable disorders include autoimmune CC diseases such as rheumatoid arthritis, hyperproliferative disorders such as cardiaca arrest, cerebrovascular disorders such as crebral ischaemia, CC as neoplasms of the breast or liver, cardiovascular disorders such as caused by bacteria, viruses and fungi, ocular disorders such as corneal CC infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as gromature labour and infertility, as glomerulonephritis and respiratory disorders such as asthma. The CC polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ន្តន្តន
copolypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The colypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and ctivity of P. acnes polypeptides and colypeptides and determining P. acnes presence, for example, by carpine linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was cobarined in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SXS
CC encoding a Propionibacterium across protein. The invention also relates to CC polypeptides encoded by the polynucleotides (ABM35624-ABM64336) and to CC immunogenic fragments of P. across polypeptides. The invention additionally encompasses expression vectors and host cells comprising a cc polynucleotide of the invention, antibodies against polypeptides of the invention; a cc method for stimulating an immune response specific for a P. across CC polypeptide and an isolated T cell population comprising P. across CC polynucleotides, antibodies, fusion proteins, T cell populations, or CC polynucleotides, antibodies, fusion proteins, T cell populations, or CC polynucleotides, antibodies, fusion proteins, T cell populations, or CC patient; and a method for inhibiting the development of P. across in a CC patient; and a method for inhibiting the development of P. across in a CC patient; and a method for inhibiting the development of P. across the proteins, T cell populations or antigen-presenting cells that express the polypeptides, antibodies, fusion CC patient. The P. across polypeptides, polynucleotides, antibodies, fusion CC patient. The polynuclations or antigen-presenting cells that express the proteins, or for stimulations or antigen-presenting cells that express the polypeptides are useful for diagnosting, preventing or treating across the polypeptides are useful for across in a cc polypeptide are properly properly properly proteins. The polynucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. across, or for treating acros, and the kit is useful for performing a diagnostic assay. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

as glomerulonephritis and respiratory disorders such as glomerulonephritis and respiratory disorders such as asthma. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sumburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences.
                                                                                                                                                                                                               diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as crops such as control disorders such as crops and disorders such as crops as the control of 
                                                                                                                                                                                                                                                                                                                                                                                             sequences AAU18508-AAU18551 represent the cytoskeletal element-related polypeptides of the invention. Cytoskeletal polypeptides and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by determining the presence or absence of a mutation in a cytoskeletal polynucleotide. The treatable disorders include autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated human cytoskeletal element-related polypeptide useful for diagnosis/treatment of neoplastic disorders, disorders associated with neural transmission, chromosomal abnormalities, autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           08-NOV-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 11;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; cytokine; cell proliferation; cell differentiation; gene th vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia;
                       The invention relates to polynucleotides (AAKS1456-AAKS3435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymerides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAKS2581), 2111 (AAKS2582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                Tang
Ma Y,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-NOV-2001

                                                                                                                                                                The present sequence is the protein sequence of mouse cofilin. This is encoded by a gene that has been identified as being up-regulated in 2 models of chronic pain, i.e. streptozocin-induced diabetes and chronic constrictive injury to a nerve leading to the spine. The expression products of such genes can be used to screen libraries for compounds and peptide agonists and antagonists of gene product activity that may be useful in the treatment or prevention of chronic pain, and in the development of diagnostic tools for the identification and
                                                                                                                                                                                                                                                                      Use of isolated gene or nucleic acid sequence, recombinant vector, host cell, non-human animal, polypeptide encoded by the nucleic acid sequence antibody, for screening of compounds for the treatment of pain, or fi

assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal level of expression of the marker in the patient sample and the normal level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB75177-ADB75631 represent marker cDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                    CC can be used in the treatment of various disease associated with altered mitochondrial function. Specifically, it refers to a method for cuseful for drug screening assays, as well as therapeutic targets. The can be used in the treatment of various diseases associated with the can be used in the treatment of various diseases associated with altered cc can be used in the treatment of various diseases associated with altered cc osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial cc encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy cc ragged red fibre syndrome (MERRF) or cancer. Accordingly, these cc compositions have neuroprotective, nootropic, antidiabetic, antiarthritic, osteopathic, ophthalmological and cc cytostatic activities. This polypeptide sequence is a human heart cc mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for identifying a candidate Chk1 pathway modulating agent. The method comprises: (a) providing an assay system comprising a modifier of Chk1 (MCHK) polypeptide or nucleic acid; (b) contacting the system with a test agent, where the system provides a reference activity except in the presence of the test agent; and (c) detecting a test agent-biased activity, and a difference between the test agent-biased activity and the reference activity. Also described: (1) a method for modulating Chk1 pathway of a cell; (2) a method for modulating Chk1 pathway in a mammalian cell; and (3) a method for diagnosing a disease in a pathent. A MCHX sequence has cytostatic activity, and can be used in gene therapy. The method is useful for identifying a candidate chk1 pathway modulating agent for preparing a composition for diagnosing or treating e.g., cancer. The present sequence represents a human MCHX protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying a candidate Chkl pathway modulating agent for treating e.g., cancer, comprises contacting an assay system comprising a MCHK polypeptide or nucleic acid with a test agent and detecting a test agent-biased activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example; SEQ ID NO 86; 266pp; English.

                                                                                                                                                                                                                                                                                                                                        RESULT 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by CP. acnes. The disorders include SAPHO syndrome (synovitis, acne, compared by CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC pervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to CC downregulate expression and activity of P. acnes polypeptides and CC therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by C enzyme linked inmunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was CC obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polynucleotide (ACF64435-ACF64733) cc encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM6536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polypeptide of the invention; an immune response specific for a P. acnes polypeptide of the invention; an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or cc antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient. The P. acnes polypeptides, polypucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides, antibodies, fusion proteins, or corrections or relating the development of P. acnes in a patient. The P. acnes polypeptides, polypucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne collipse to the polypeptides are useful for diagnosing, preventing or treating acne protein. The polymucleotides can also be used as probes or primers for mucleic acid hybridisation. The vaccine composition is useful for the composition is useful for the present of the present of polypeptide predicted to be encoded by an ORF (open creating frame) contained within the P. acnes polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel nucleic acid molecules isolated from CC pathogenic Borrelia bacteria that each encode a variable major protein CC (VMP)-like sequence (VLS) peptide. Specifically, it refers to recombinant CC VLS genes and immunogenic compositions derived thereof, from Borrelia CC garinii (B. garinii) and Borrelia afzelii (B. afzelii). The present CC invention describes the use of antibodies against the expressed VLS CC proteins where immunologic binding is indicative of a Borrelia infection, CC in particular infections that include Lyme disease, relapsing fever or CC related diseases in humans and animals. Accordingly, these antibacterial CC compositions can be used for gene therapy, immunoprophylaxis, diagnosis CC or treatment of such diseases, which due to the VMP antigenic variation CC system often evade the immune system response despite the occurrence of host antibody and cellular responses. This polypeptide is a protein CC encoded by a Borrelia afzelii strain ACAI open reading frame DNA sequence CC from the VIs locus silent cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                             polypeptides of the invention. Cytoskeletal polypeptides and their associated polymucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by determining the presence or absence of a mutation in a cytoskeletal polymucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as gastrointestinal disorders such as Crohn's disease, renal disorders such as consecutions.
                                                                                      specification, at ftp.wipo.int
                                                                                                                   as glomerulonephritis and respiratory disorders such as asthma. The polypeptides can also be used to aid wound healing, to prevent skin aging due to subburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAU18508-AAU18551 represent the cytoskeletal element-related polypeptides of the invention. Cytoskeletal polypeptides and their associated polynucleotides are useful in the diamnosis transmission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated human cytoskeletal element-related polypeptide useful for diagnosis/treatment of neoplastic disorders, disorders associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoded polypeptides (AAM78333-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disporders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.

Claim 22; SEQ ID NO

97; 182pp; English

The invention relates to a recombinant DNA construct comprising a promoter functional in plants operably linked to an oil-associated gene. The construct is useful for transgenic plant seed which has in its genom the construct, that is functional in the plant to transcribe the oil-

its genome he oil-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel nucleic acid molecules isolated from pathogenic Borrelia bacteria that each encode a variable major protein (VMP)-like sequence (VLS) peptide. Specifically, it refers to recombinant VLS genes and immunogenic compositions derived thereof, from Borrelia garinii (B. garinii) and Borrelia afzelii (B. afzelii). The present invention describes the use of antibodies against the expressed VLS proteins where immunologic binding is indicative of a Borrelia infection, in particular infections that include Lyme disease, relapsing fever or related diseases in humans and animals. Accordingly, these antibacterial compositions can be used for gene therapy, immunoprophylaxis, diagnosis or treatment of such diseases, which due to the VMP antigenic variation system of such diseases, which due to the VMP antigenic variation system of such despite the occurrence of host antibody and cellular responses. This polypeptide is the Borrelia afzelii strain ACAI vls ORF 13 protein expressed by the pBA-13-1 plasmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            maize, plant, oil-associated gene, transgenic, enhanced seed oil, vegetable oil.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Maize oil-associated gene protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADJ48363 standard; protein; 342 AA

                 The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polympetide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant with the recombinant DNA construct and growing the transformed plant with the polymucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties.
                                                                                                                                                                                                                                                                                                                                                                                                                         New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; homologous recombination; seed oil yield; protein yield; carbohydrate;

The transgenic plant seed grows into a plant having seed oil as compared to wild type. The construct is useful for hybrid maize seed. The transgenic plant seed is useful for yegetable oil. The present sequence represents the amino acid

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positio provide for expression of a polynucleotide encoding a polynucleotid

comprising a ter is positioned to

plant

from þ New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc transformed plant having an improved property. The plant is a crop plant country such as maize or soybean. The method of producing a transformed plant chaving an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. Cc The recombinant DNA construct is useful for producing plants with the cc improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of protein yield and/or cc content, improved plant growth and development under at least one stress crope of the invention. Note: The sequence data for this patent did not compart form the printed specification but was obtained in electronic contents from the printed specification but was obtained in electronic content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ds snw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mouse GANP protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB22942;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAB22942 standard; protein; 1971 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 693 AA;
This sequence represents mouse GANP protein. The invention relates to the mosue and human GANP proteins (AAB22942, AAB22943) which are 210 kD in size, have kinase activity and participate in signal transduction during abnormal B cell differentiation. The invention also encompasses nucleotides encoding GANP proteins, variant GANP proteins, and antibodies
                                                                                                                                                                                                                                                  GANP proteins participating in signal conversion of abnormal B cell differentiation in autoimmune state and having kinase activity, use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-AUG-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-JAN-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       format from USPTO at seqdata.uspto.gov/sequence.html.

                        Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogeni polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to transgenic non-human animals and their offspring which are transformed with germinal center associated nuclear protein (GANP) gene. The GANP gene, encoded protein and transgenic animals express GANP can be used for the production of high-affinity antibodies to viral antigens for treatment and prevention of infection by viruses such as human immunodeficiency virus and hepatitis C virus. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                      Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2001-616774/71.

These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mitcham JL, Ske

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 58 AA;

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogen. polypeptides. The proteins and their associated DNA sequences are used the treatment, prevention and diagnosis of medical conditions caused by p. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central P. acnes is also involved in infections of bone, joints and the central P. acnes is also involved in infections of bone, joints and the central P. acnes is also involved in infections of bone, joints and the contral P. acnes is also involved in infections of bone, joints and the contral p. acnes is also involved in infections of bone, joints and the contral p. acnes is also involved in infections of bone, joints and the contral p. acnes is also involved in infections of bone.

The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly form.

A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64336) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising P. acnes polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-APR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Propionibacterium acnes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Acne vulgaris; antiseborrhoeic; dermatological; antibacterial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20-OCT-2003

The p. acnes polypeptides, polymucleotides, antibodies, fusion cc proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne correction. The polymucleotides can also be used as probes or primers for mucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response specific for a p. acnes correction. The polymucleotides can also be used as probes or primers for the stimulation of an immune response against p. acnes, or for treating acne, cand the kit is useful for performing a diagnostic assay. The present canding frame) contained within the p. acnes polymucleotides of the creation. Note: The sequence data for this patient did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

The invention comprises the amino acid sequence of proteins from the hyperthermophile Methanopyrus kandleri, the invention also comprises the complete genome from Methanopyrus kandleri. The Methanopyrus kandleri proteins of the invention are useful for enhancing the stability and/or activity of other proteins. The Methanopyrus kandleri genome is useful in

New isolated nucleic acids kandleri proteins, and the as diagnostic agents.

encoding any of about 1700 Methanopyrus encoded proteins, useful as a medicamen

The present invention describes a nucleic acid molecule (I) selected from CC DP119, DP444, DP810, DP685, WE474, DP160, RA977 and RA770, or its encoded CC polypeptide, or a fragment or variant of the nucleic acid or polypeptide, (CC or an effector/modulator of the nucleic acid or polypeptide. (I) is used CC in manufacturing a pharmaceutical agent, in monitoring or controlling the CC function of a gene or gene product influenced or modified by a DP119, CC DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide. (I) has CC in gene therapy. (I) is useful for diagnostic or therapeutic CC applications, or for manufacturing an agent for diagnosts, monitoring, CC prevention or treatment of pancreatic disorders, such as diabetes and correct consequence of the correct of iseases. It may also be used for detecting and/or verifying, for the creatment, alleviation and/or prevention, of a pancreatic dysfunction CC (e.g. diabetes, hyperglycaemia or impaired glucose tolerance), and cc related disorders including obesity, and neurodegenerative disorders, and other contents, in cells, cell masses, organs and/or subjects. It is also used conters, in cells, cell masses, organs and/or subjects. It is also used contents and of the contents and or prevention of the cells, cell masses, organs and/or subjects. It is also used contents and or function of the contents and or function of the contents and or function of the contents and or promoting the differentiation and/or function of the contents and or promoting the differentiation and/or function of the contents and or promoting the differentiation and/or function of the contents and or promoting the differentiation and/or function of the contents and or promoting the differentiation and/or function of the contents and or promoting the differentiation and/or function of the contents and the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  non-human animal which over- or under-expresses the DP119, DP444, DP810 DP685, MEA774, DP160, RA977 or RA770 gene product. In addition, the nucleic acid molecule, polypeptide or an effector/modulator of the nucleic acid or polypeptide, is used in monitoring or controlling the function of a gene or gene product influenced or modified by a DP119, DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide, or in identifying substances that interact with the polypeptide. The present sequence is used in the exemplification of the present invention.

polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determined the contact that being a sample with a binding agent that binds to the proteins of the invention

Barth B,
encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                           New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                     The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
                                                                                                                                                                                                                                                                                          Example 1;

The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins. T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for nucleic acid hybridiaation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the
                         The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Propionibacterium acnes immunogenic polypeptide #30191

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC antigen-presenting cells that express the polypeptide); a method and kit CC for detecting or determining the presence or absence of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the CC polypeptides are useful for diagnosing, preventing or treating acne CC polypeptides are useful for diagnosing, preventing or treating acne CC vulgaris, or for stimulating an immune response specific for a P. acnes CC protein. The polynucleotides can also be used as probes or primers for CC nucleic acid hybridisation. The vaccine composition is useful for the CC stimulation of an immune response against P. acnes, or for treating acne, CC and the kit is useful for performing a diagnostic assay. The present CC sequence represents a specifically claimed P. acnes polypeptide which is thought to contain an immunogenic region. Note: The sequence data for CC chis patent did not form part of the printed specification, but was CC obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polymucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acros polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polymucleotide of the invention; antibodies against polypeptides of the invention; antibodies against polypeptides of the invention; a

The invention relates to an isolated polymucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

Cc P. acnes is also involved in infections of bone, joints and the central conervous system, however it is particularly involved in the inflammatory cc lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a cc sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The cc polypeptides may be used as antigens in the production of antibodies conspected for P. acnes proteins. These antibodies can be used to compregulate expression and activity of P. acnes polypeptides and cc devargelate expression and activity of P. acnes polypeptides and cc diagnostic agents for determining P. acnes presence, for example, by cc enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was cc for with a patent did not form the consence of the printed specification of the patent directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared covia this method; a vaccine composition (comprising T cells prepared cc via this method; a vaccine composition (comprising P cells populations, or cc antigen-presenting cells that express the polypeptide); a method and kit cf for detecting or determining the presence or absence of P. acnes in a cc patient; and a method for inhibiting the development of P. acnes in a cc patient. The P. acnes polypeptides, polymuclectides, antibodies, fusion cc polypeptides are useful for diagnosing, preventing cells that express the cc polypeptides are useful for diagnosing, preventing or treating acne cc vulgaris, or for stimulating an immune response specific for a P. acnes cc roctein. The polymuclectides can also be used as probes or primers for cc nucleic acid hybridisation. The vaccine composition is useful for the cc simulation of an immune response against P. acnes, or for treating acne, cand the kit is useful for performing a diagnostic assay. The present cc sequence represents a polypeptide predicted to be encoded by an ORF (open creading frame) contained within the P. acnes polymucleotides of the cc invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly form wipo at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc and in recombinant production of (II). The polynucleotides are also used ci in diagnostica as expressed sequence tags for identifying expressed companies. (I) is useful in gene therapy techniques to restore normal cuseful for generating antibodies against it, detecting or quantitating a copypeptide in tissue, as molecular weight markers and as a food copypeptide in tissue, as molecular weight markers and as a food copypeptide and its binding partners are useful in medical imaging cof sites expressing (II). (I) and (II) are useful for treating disorders complyapetide and polynucleotide sequences have applications in companies, forensics, gene mapping, identification of mutations companies, forensics, gene mapping, identification of mutations companies for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in constraint of the invention. Note: The sequence data for this cate of the invention. Note: The sequence data for this cate of the invention of the sequence data for this cate of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                           New nucleic acid from Ashbya gossypii, useful, when modulated, for producing fine chemicals, e.g. amino acids, encodes membrane-construction or -transport proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            29-AUG-2003

The present invention describes a polynucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide sequences given in ABQ81842 and ABQ81843, or a sequence sixen in ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encodinable and ABQ81843. Also described is a polynucleotide (II) encodinable for the present of the prese

encoding

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to

6

Claim 7;

SEQ ID NO 30600; 1481pp; English.

New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

CC heterologous polypepide. [7] has antidiarrheic and antibacterial CC activities, and can be used as an inhibitor of Salmonella. [1] (which is C a probe) is useful for the detection and/or identification of Salmonella. [1] (which is C Bifidobacterium longum in a biological sample. A carrier containing the CC lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be CC used for preventing and/or treating diarrhoea brought about by pathogenic CC bacteria and/or rotavirus. The carrier is a food composition selected CC products, ice-creams, fermented cereal based products, milk based from milk, yogurt, curd, cheese, fermented milks, milk based fermented CC products, ice-creams, fermented cereal based products, milk based CC products, infant formula, pet food or a pharmaceutical composition CC supplement, wet oral supplement, dry tube feeding or wet tube feeding. CC [1] is useful in DNA arrays or chips to carry out analysis of the CC expression of the Bifidobacterium gene. ABG81844 to ABG81850 represent CC Bifidobacterium related nucleotide sequences given in the Sequence CC specification. N.B. The sequence data for this patent is not represented CC in the printed specification but is based on sequence information CC supplied by the European Patent Office
